WORRACHIT PONGKEATKARM

Full-Stack Developer

37/79 Regent Home Condo 5, Chomphon, Chatuchak, Bangkok 10900 | +66 80-891-9082
pkk.theme@gmail.com | linkedin.com/in/pkk-worrachit/

PROFILE

Full-Stack Developer with 3+ years of professional experience building and scaling multi-tenant e-commerce ecosystems, enterprise SaaS platforms, and internal tooling. Specialized in React, Next.js, and TypeScript with deep expertise in CMS architecture using Draft/Commit workflows and Drag-and-Drop interfaces, streaming APIs, bulk data processing, and SWR-based state synchronization. Currently a core engineer at Bit Concept Co., Ltd., building Monifica, a multi-tenant asset and maintenance management platform, from its first commit across a Laravel API, Nuxt applications and a shared UI package, and owning the CI/CD pipelines that generate TypeScript types from OpenAPI specs. Proven track record of engineering UI systems for complex business logic, performance, and developer experience in Agile/Scrum environments.

TECHNICAL SKILLS

Frontend React.js, Next.js, Nuxt.js, TypeScript, JavaScript, TailwindCSS, HTML5, CSS3, jQuery, Bootstrap
UI Libraries Elastic UI (EUI), Material UI (MUI), NuxtUI, Recharts, Lexical Editor
Backend & API Laravel (PHP), REST API, OpenAPI/Scramble, ASP.NET MVC
DevOps & Tools Git, GitHub Actions, CI/CD Pipelines, npm package publishing, Bruno
Practices SOLID Principles, Component-Driven Dev, Feature Flags, Dirty State Guards, Agile/Scrum

PROFESSIONAL EXPERIENCE

Full-Stack Developer

Oct 2025 – Present

Bit Concept Co., Ltd. | Bangkok, Thailand

Stack: *Nuxt.js, TypeScript, Laravel, OpenAPI, PHPUnit, GitHub Actions*

Platform & Backend

- Built core domain modules end to end across API and UI: workspaces, sectors and companies, users, roles and permissions (including Google sign-in with account linking), assets, check sheets, spare parts and inventory, and repair jobs.
- Designed and built the notification engine: events generated from check sheet and repair job activity (thresholds, missing submissions, about 15 repair job events), delivered by email and an in-app notification center with per-channel preferences and subscriptions.
- Built a reusable audit-log foundation and rolled it out across assets, users, roles, repair jobs, check sheets and other modules, with admin history pages.
- Delivered check sheet scheduling with calendar preview, QR code scan flows and XLSX submission export, plus repair job public share links and QR modals.
- Built company and personal dashboards with shared widgets, and improved the admin dashboard.

Shared UI & Frontend

- Created shared components in the common UI package used by both apps, including the sidebar, table composable, page header, signature input, date and icon pickers, and tag components.
- Added HEIC/HEIF image upload support and a maintenance page for 503 responses.

CI/CD & Developer Tooling

- Designed and implemented a CI/CD pipeline to generate and publish TypeScript API types from OpenAPI specifications, eliminating manual type duplication across frontend codebases.
- Maintained pipeline workflows covering API spec validation, typechecking, automated testing, linting, and npm package publishing; sped up PHPUnit runs and workflows with per-step conditions.
- Implemented image optimization workflows on cloud storage infrastructure, measurably reducing asset load times and operational costs.
- Documented the test strategy and database schema, and maintained Bruno API collections covering nearly every feature.

Collaboration & Ways of Working

- Collaborated with a US-based frontend team to integrate APIs and keep frontend-backend contracts consistent across distributed, asynchronous teams.
- Supported production systems through debugging, implementing new features, and improving system stability across the stack.
- Use Claude Code as a supervised assistant for scaffolding and test data setup; I set the project conventions and review and own every change.

Frontend Developer

Feb 2024 – Sept 2025

Digithun Worldwide Co., Ltd. | Bangkok, Thailand

Stack: *Next.js, React, TypeScript, TailwindCSS*

Contributed to ShopScape — a multi-tenant e-commerce platform powering Super Admin, Seller, and Web Buyer applications for brands including Yuedpao, SE-ED, Reeeed, and 365BeautyClub.

CMS Architecture & Drag-and-Drop Engine

- Engineered a dynamic drag-and-drop homepage and footer builder using React Context and Elastic UI (EUI), implementing a Draft/Commit workflow to ensure data integrity before production deployment.
- Developed shared DnD primitives using euiDragDropReorder for complex homepage sections (Hero Banners, Product Strips, Menus) with a 300ms debounced callback to minimize API overhead at 60fps.
- Built a Right Panel Editor providing immediate side-by-side configuration for the active draggable section.
- Integrated Lexical-based rich text editors across Admin and Seller platforms, handling complex serialization for blog management and digital voucher systems.
- Developed a 3-level category hierarchy and slug management system using SWR for data fetching and Yup for strict schema validation.

Bulk Data Processing & Streaming

- Architected an XLSX import/export pipeline using ExcelJS featuring per-row error mapping, client-side pagination, and streaming reports for large-scale data sets across the Seller platform.
- Built a Zortout (ERP) synchronization UI using ReadableStreams to display real-time progress percentages with two-phase sync cancellation, handling live data streaming gracefully.

State Management & Performance

- Leveraged MobX for complex client-side state models (Add-on/Bundle deals) and SWR for real-time updates and optimistic UI patterns.
- Implemented Debounced Search and requestIdleCallback for non-blocking event tracking, improving main-thread availability during high-frequency user interactions.
- Implemented Feature Flags to manage incremental rollouts of AI Search and delivery discount modules.
- Standardized form handling with a custom useFormHelper and Dirty State Guards (via lodash) to prevent data loss during navigation.

Analytics, UI Components & SEO

- Created an analytics dashboard with Recharts featuring custom date-range pickers (Agoda/GA-style) with Previous Period comparison toggles and SWR-keyed caching to prevent redundant API calls.
- Built a polymorphic Coupon UI Component dynamically adapting layout, gradients, and borders by coupon type (Discount, Free Shipping, Add-on) with a Quota Progress Bar and Collect All state machine.
- Developed a FormInputCropImage component managing Temporary File Path workflows (PUT with tmp paths) before final form submission.
- Implemented JSON-LD injection for products and blogs to enhance SEO structured data compliance.
- Integrated configurable CDP tracking for customer sites gated by cookie consent, enhancing data-driven insights.
- Developed a high-conversion Buyer web app with Embla Carousel for responsive e-commerce browsing.

Frontend Developer

Sept 2022 – Jan 2024

Bluewind Solution Co., Ltd. | Klongluang, Pathumthani

Stack: *HTML5, Bootstrap, JavaScript, jQuery, ASP.NET MVC, AJAX, REST API*

First professional role, building responsive enterprise web UIs and collaborating with backend teams on API integration.

- Contributed to a production ASP.NET MVC web application used by enterprise clients, implementing responsive UI components and interactive features.
- Designed and built responsive interfaces using HTML5, Bootstrap, JavaScript, and jQuery ensuring cross-browser compatibility.
- Integrated REST API and AJAX data exchange patterns for dynamic page updates without full reloads; collaborated with backend team on API contracts.
- Optimized page load times through asset optimization, deferred loading, and DOM query improvements, improving perceived performance across enterprise modules.

EDUCATION

Bachelor of Science — Electronics Physics (2017 – 2021)
Thammasat University, Pathum Thani, Thailand | GPAX: 3.23
Graduation Project: Diaper Moisture Detection System Using NFC Technology — Designed a low-cost IoT moisture sensing system combining NFC communication with hardware and embedded software, demonstrating cross-disciplinary engineering capability.
